	PREDICTIONS	OBJECTIVES	DATA
3RO	<div><b>End-user</b></div> <div>Who will use the predictive system / who will be affected by it?</div> <div>Prediction system will be used by Music Label to find potentially popular songs. Authors of these songs are affected by this prediction system.</div>	<div><b>Value proposition</b></div> <div>What are we trying to do for the system's users? (e.g. spend less time on X, increase Y...)</div> <div>Signing the contract with songs author's at the earlies stages of their career results in higher future returns for Music Label and faster promotion for the authors.</div>	<div><b>Data sources</b></div> <div>Where do/can we get data from? (internal database, 3rd party API, etc.)</div> <div>internal database, spotify api</div>
	<div><b>Problem</b></div> <div>Question to predict answers to (on behalf of user)</div> <div>How popular is this song going to be?</div> <div>Input (i.e. question "parameter")</div> <div>Information about song</div> <div>Possible outputs (i.e. "answers")</div> <div>estimated popularity in range from 0 to 100</div> <div>Type of problem (e.g. classification, regression, recommendation...)</div> <div>regression</div> <div>Baseline: simple, alternative way of making predictions (e.g. manual rules)</div> <div>manual rules</div>	<div><b>Performance evaluation</b></div> <div>Domain-specific / bottom-line metrics for monitoring performance in production</div> <div>Hit rate - ratio of close predictions and overperforming authors over total predictions</div> <div>Prediction accuracy metrics (e.g. MSE if regression; % accuracy, #FP for classification)</div> <div>MSE</div> <div>R2</div> <div>Offline performance evaluation method (e.g. cross-validation or simple training/test split)</div> <div>Cross-validation is the main evaluation method.</div>	<div><b>Data preparation</b></div> <div>How do we get training data (inputs, and outputs if supervised learning)? How many data points?</div> <div>All data is gathered from spotify api</div> <div>Input features (extracted from data sources). If too many, list types of features and mention key ones.</div> <div>song genres: provided as a list of labels</div> <div>available markets: provided as a list of labels</div> <div>information about artist: number of followers</div> <div>information about album: release date, number of tracks, album_name, ...</div> <div>information about the track: loudness, danceability, energy, valence, ...</div>
E SF			
5RAT	<div><b>Using predictions</b></div> <div>When do we make predictions and how many?</div> <div></div> <div>What is the time constraint for making those predictions?</div> <div></div> <div>How do we use predictions and confidence values?</div> <div></div>	<div><b>Learning models</b></div> <div>When do we create/update models? With which data / how much?</div> <div></div> <div>What is the time constraint for creating a model?</div> <div></div> <div>Criteria for deploying model (e.g. minimum performance value — absolute, relative to baseline or to previous model)</div> <div></div>
